

Lightforth — Security & Privacy Overview

Security Philosophy

Lightforth handles people's resumes, job applications, and live interview audio — some of the most personal material in someone's career. We treat it that way.

Certifications & Compliance

GDPR & CCPA

- **Status:** Compliant
- **Consumer rights supported:** access, export, deletion, opt-out
- **We do not sell customer data.**

Data Residency

- US-based hosting (AWS)
-

Data Security

Encryption

Layer	Method
In transit	TLS 1.3
At rest	AES-256

Access Controls

- Multi-factor authentication available on all accounts
 - Role-based access for coach/organization admin dashboards (bundle plans)
-

Data Privacy

What We Collect

- Account info: name, email
- Resume and application content (customer-owned)
- Interview audio, processed live for Copilot suggestions
- Anonymized usage analytics

What We Don't Collect

- Payment card data (processed by Stripe — never touches our servers)
- Anything beyond what's needed to run the product

Data Ownership

- **You own your data.** Export anytime.
 - Cancel and your data is retained 30 days (for export), then deleted unless reactivated.
-

Interview Audio — The Question People Actually Ask

"Is my interview audio recorded and stored?"

Audio is processed in real time to generate Copilot's suggestions. It is **not persisted** unless you explicitly enable session recording in settings. If you do enable it, recordings are retained per your own retention setting and can be deleted anytime.

"Can the interviewer tell I'm using Copilot?"

No. Suggestions render only on the candidate's own screen. There is no signal visible to anyone else on the call.

AI & Data Usage

- **We do not use your resume, application, or interview data to train AI models.**
 - AI suggestions are generated in real time via third-party AI providers under strict data-processing agreements — no persistent model training occurs on customer content.
 - You can review any AI-generated suggestion or resume rewrite; nothing is applied without your action (Auto-Apply always shows you the match list before submitting).
-

Coach & Organization Bundles

- Bundle admins can see seat activation status and aggregate usage (e.g., "18 of 20 seats active"), but **cannot see an individual's resume, applications, or interview content**. Coaching happens outside the platform; Lightforth doesn't expose personal job-search material to the org admin.
