

Lightforth — Onboarding Playbook

Overview

Most Lightforth onboarding is self-serve and fast — the goal is a tailored resume and a first Auto-Apply batch inside 15 minutes of signup. Coach/organization bundles have one extra step: seat setup.

Individual Onboarding (Self-Serve)

Minute 0-5: Sign Up

- Create account, verify email
- Upload existing resume (or start from a template)

Minute 5-15: First Value

1. Paste a real target job description
2. Resume Builder tailors the resume and shows the ATS score
3. Review and download, or push straight into Auto-Apply

Day 1-3: Get Rolling

- Set Auto-Apply preferences (roles, locations, must-haves)
- Review the first match list and approve applications
- Run one Interview Prep session for the most likely question type

First Real Interview

- Download the desktop app for Interview Copilot / Coding Copilot / Meeting Copilot (Premium)
 - Grant screen + audio permissions
 - Do a 2-minute test run before the real call
-

Coach / Organization Bundle Onboarding

Day 0: Bundle Purchased

- Admin account created, seats provisioned
- Welcome email with a bulk invite-code sheet for their cohort

Day 1: Distribute Seats

- Admin shares individual invite links (or a shared signup code) with each person in the cohort
- Each person creates their own account — their resume/application/interview content is never visible to the org admin

Day 1-2: Admin Dashboard Walkthrough (30 min)

- Seat activation status
- Aggregate usage view (no individual content)
- Billing and seat management

Ongoing

- Org admin can add/remove seats anytime; unused seats aren't billed until activated
-

Common Onboarding Issues

"I uploaded my resume but the tailored version looks off"

- Make sure the original resume has real content in each section (not just a template) — the tailoring engine works best with complete source material.

"Auto-Apply isn't finding matches"

- Broaden role titles or locations in Auto-Apply preferences; very narrow filters return few or no matches.

"Copilot isn't picking up audio"

- Confirm screen + audio permissions were granted to the desktop app, and that the correct audio device is selected in settings.

"My cohort's invite code isn't working" (bundle)

- Confirm the seat was actually activated by the org admin — an invited-but-unactivated seat can't complete signup yet.
